DIY Dueling Tree Target Kit Instructions

Thanks for your recent purchase of your DIY dueling tree target kit. The Target Man, LLC is the inventor of the DIY dueling tree. With thousands of kits sold, we ensure you that you are receiving top-tier armor grade targets and an incredible price point.

First, you need to source angle iron for the “upright” portion of the tree. You **MUST** use 1.5”x.25” angle iron. Please see recommended upright length below for the target kit you purchased...

- For 4 paddle kit- 4 ft.
- For 6 paddle kit- 5.5 ft.
- For 8 paddle kit- 7 ft.

Assembly is super easy! After you cut your angle iron to the proper length based on the number of paddles you purchased, all you have to do is weld on the first piece of tubing 2” from the edge (top edge) of the angle iron, and then weld each additional tube with exactly 5.75” between them. This will give you the perfect distance needed to be able to insert/remove the paddles.

For the base, we highly recommend our Multi-Purpose Base (MPB). The MPB automatically positions your angle iron and the correct angle needed, which we recommend to be 22 degrees of “lean”. The target must lean to the shooter at this angle to keep the paddles on either the left or right side. If you experience “bounce back”, that generally means you did not put enough “lean” on the angle iron.

Should you not wish to purchase our collapsible MPB, we recommend you make your base in a “H” shape configuration for maximum stability. Angle iron is perfect for making your base. We recommend that you somehow make it so you can remove the upright portion of your dueling tree for easy transport.

Please give us a call should you have any questions or concerns about the kit. 520-789-0875. Thanks for your purchase, and rest assured we’re here to help if you need it.
